Importance: High

Hi Tom,

I was just going back through my notes and it appears that back on June 21st I called you to ask for a table/summary of the primary and secondary functions and values of the freshwater wetlands, coastal wetlands and streams that are being impacted. I also need the same information for the area being proposed to be preserved. I looked though Section 13 of the application, but can not seem to locate any such tables/summaries. Please respond to this e-mail at your earliest convenience.

Thank you.

Hi Tom,

I was just speaking with John Hopeck- He told me that he still has not received the soils test pit information, which he needs to look at as part of his review.

Also, could you please update me on how you are coming along with gathering the additional information that has been requested from DMR and IFW?

Thanks.
